# ChatGPT Plugins

Alex Aldridge, Canada   November 12, 2023
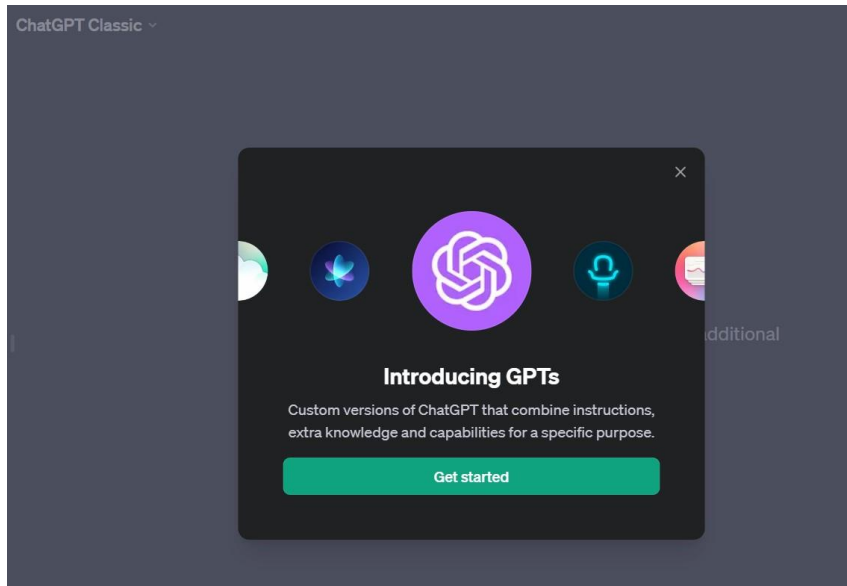

Plugins

ChatGPT plugins offer extended functionality with dynamic responses and are customizable, integrating external tools and databases. These tools were designed specifically for language models with safety as a core principle, and to help ChatGPT access up-to-date information, run computations, or use third-party services.

My GPTs

"My GPTs" refers to GPT models that users have trained or customized for specific tasks, the comparison would focus on the customization level, training data used, and specific use cases they are optimized for.

GPTs are a new way for anyone to create a tailored version of ChatGPT to be more helpful in their daily life, at specific tasks, at work, or at home. For example, GPTs can help users learn the rules to any board game, help teach kids math, or design logos.

Creativity

Creating your own GPT model is simple and does not require any programming skills. These models can be personalized for individual use, designed exclusively for your organization, or made available to the general public. The process involves initiating a dialogue, providing guidelines and additional information, and selecting its capabilities, such as internet searches, image creation, or data analysis. Experience it yourself at chat.openai.com/create.

In late November of 2023, ChatGPT is launching the GPT Store, featuring creations by verified builders. Once in the store, GPTs become searchable and may climb the leaderboards.

ChatGPT is confident that the most remarkable GPT models will emerge from community creators. Whether you're a teacher, a mentor, or simply someone passionate about crafting useful tools, you can create a GPT without any coding knowledge to share your expertise.

My GPTs

I already created a list of Sourceduty GPTs to use and share. I understand ChatGPT and I really like using it. I will adapt to any changes made to ChatGPT and continue to find innovative ways of using ChatGPT.

Summary

ChatGPT plugins enhance its functionality, allowing it to access real-time information and user-customized GPTs enable individuals to and share a GPT models.
